What is MyCells®?

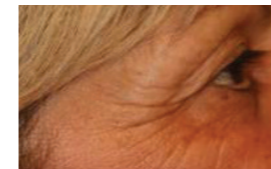

MyCells® uses a purified and concentrated portion of your own blood to rejuvenate your facial skin.

MyCells® provides your doctor with a simple way to harvest key cells and proteins found in blood so they can be utilized to regenerate your skin and the tissue underneath. This effective and therapeutic blood fraction is known as Platelet Rich Plasma (or PRP) and is capable of naturally accelerating normal healing pathways. Additionally, PRP can stimulate the regeneration and recovery of aging facial tissue in order to permanently reduce wrinkle pouches and improve skin tone.

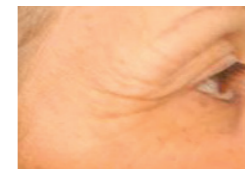

The PRP is not only rich in platelet cells, but also contains important growth factors and even some of your own stem cells to further stimulate the restorative process. When the PRP material is injected, it represents a completely natural and effective way to re-construct your facial skin including the tissues around the eyes. Because **MyCells®** uses your own blood, it contains no foreign or synthetic chemicals and has no side effects.

And worth waiting for!
